

***CLIMATE***

***RACE!***

***INSTRUCTION***

***SHEET FOR KIDS***

**1. Choose your preferred team:** there're 4 teams in this game, Forest, Ocean, Sky and City. (Rock Paper Scissor? Duel? Your choice). More than 1 person could be assigned into one team.

**2. Get familiar with the components:** When you first enter your own team, there's a couple of elements you need to keep in mind.

**Objects:** You consider these as your score in this game, you will gain or lose them, depending on your performance.

**Life:** You have three lives! use them wisely. You can choose to lose one life if your points are at a very dangerous amount.

**Question cards:** You'll receive 4 decks of quiz cards, each related to the topic of a team.

**Starting point:** Each team can find their starting point at the corner of the board.

**Luck tile/card:** Each card contains all the possibilities for you to turn your luck around.

**Catastrophe tile/card:** terrible consequences of climate change, just like real life, if we don't take action now.

**Global temperature scale:** Just like real life, your action has reaction, environmentally negative action will result in the increase of the temperature scale. The starting point is +2.4.

**Tiles:** Depending on which tile you land on, you will have to answer a question form that topic!

## Now you know the essentials, let's get to the board!

### 3. How to play the game

- Each team starts off from its own **corner**
- Like most of board games, you have to **roll the dice** to move further on
- Depending on what tile you land on, you either **answer a question from a certain topic**, or you could land on one of **the luck dependent** tiles.
- If you land on a zone differnt from yours, you and the owner of that can discuss the question together.
- Depending on your answer, you (and in some cases another zone) receive a reward or punishment (T.S. stands for temperature scale).

Reward	Punishment
+1 Points/ T.S.-0.1	-1 Points or-1 life/ T.S. +0.1

- You don't need to answer any questions if you're in the winning zone
- Upon reach the corner you started from, you can only cross to the end point, if you fulfill two conditions:

- 1- Own at least 10 points
- 2- The global warming temperature scale is under the starting point

**That's it for the basics! Now get on the board and win the race, not only for yourself, but for everyone!**
